                                                                                                                 The present invention describes a new intracellular interactor and novel protein:protein interaction (BH) domain binding protein having (parts of) one of the following human derived sequences designated: (I) h-NUMB; (II) h-NUMB-R; (III) h-RAB-R; (IV) ehb3; (V) ehb10; or (VI) ehb21. The present invention also describes peptides containing at least one NPF (Asp-Pro-Phe) motif, able to bind to a protein with at least one EH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Significant regions of the allergen were identified using the overlapping peptides of the full epitope derived from a Cry j II antigen-specific T cell line. Amino acids 66-80 (AAR97884) and 186-200 (R978908) of the full mature 460 amino acid allergen are the most allergenic of the 90 peptides tested.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAR97871-R97960 are overlapping peptides used for the epitope mapping of the Japan cedar pollen allergen Cry j II. Cry j II and allergenic peptides of it are useful in the diagnosis, prevention and treatment of Sugi pollinosis, the allergic reaction to Japan cedar pollen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human: cytoplasmic protein; EH-containing protein; eps15; eps15R; eps15 homology; intracellular interaction; EH domain binding specificity; eps15 homology; intracellular interaction; EH domain binding specificity; eps15 homology; intracellular interaction; EH domain binding specificity; eps15 homology; intracellular interaction; end in the second specific speci

                                                                    Fragments (AAW00707-20) of human signal transducer and activator transcription 5 (hStat 5) (AAW00706) retain hStat 5 specific binding affinity and are capable of eliciting antibodies capable of distinguishing hStat 5 from other Stats and Stat-related proteins such as mammary gland factor. They can be produced by chemical synthesis or by recombinant methods. They are useful e.g. in two-hybrid screening to identify intracellular targets which specifically bind to hStat 5. Screening assays incorporating the fragments are used to identify agents useful in the diagnosis, prognosis or treatment of diseases associated with undesirable cell growth, differentiation and/or cytokine

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6207373

GENERAL INFORMATION:
APPLICANT: SOSNOWSKI, Ronald G.

ITTLE OF INVENTION: METHODS AND APPARATUS FOR DETERMINATION OF LENGTH
TITLE OF INVENTION: METHODS AND APPARATUS FOR DETERMINATION OF LENGTH
FILE REFERENCE: DAVID B. MURPHY: Nanogen 221/157

CURRENT APPLICATION NUMBER: US/09/030,156

CURRENT FILING DATE: 1998-02-25

NUMBER OF SEQ ID NOS: 28

SOCTWARE: Patentin Ver. 2.0

SEQ ID NO 21
LENGTH: 41

TYPE: DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ; OTHER INFORMATION: Description of Artificial Sequence: Human ; OTHER INFORMATION: Biotin US-09-030-156-21

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequences given in AAQ65365-72 are primers which were used in the amplification of alpha and beta chain coding region fragments of the fish gonadotropin hormone (GTH) cDNA. GTH may be produced by transforming a host organism with the amplified sequence and collecting the protein from the culture medium. The GTH produced may be used for the promotion of maturation and oviposition in fish and other animals.
                                                                                                                                     presence
                                                                                                                                                                                                                                                                                                                                                                WPI;
                                                                presence or absence of a predetermined endogenous nucleic acid targe sequence (ENAT). The method comprises hybridising a probe having an identifier nucleotide (IN) with ENAT which is treated with an enzyme that depolymerises the 3' end of hybridised NA to release the INS.
                                                                                                                                                                                                        Example;

                                                                                                                                               The present sequence is a linker used in a gene delivery vehicle comprising an element of adenovirus type 35 or a functional equivalent of such an element. The element is responsible for avoiding or reducing neutralising activity against adenoviral elements by the host to which the gene is to be delivered. The vehicle can be used to deliver genes or the later than the second process of the sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      a sample is an allele from a homozygous or heterozygous locus. The method is also useful for detection of mutations, translocations SNPs in nucleic acids (including those associated with genetic didetermination of viral load, species identification, sample contamination, and analysis of forensic samples. AAA86791 to AAA8 and AAB12817 represent sequence which are used in the exemplification.
                                                                                      the gene is to be delivered. The vehicle can be used to deliver gene
nucleic acids of interest to host cells. Use of the delivery system

Vector DNA was prepared from a derivative of pWDA2 (gil4732114) gipkAF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XL10-Gold (Stratagene) cells and selected for ampicallin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            protein search, using sw model

                                                                                                                                                                                                                                                                                                                                                                          clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX84924) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 125 novel genes and their fragments (nucleic acid sequences: AAX84933-X85057; amino acid sequences AAX75567-Y27933) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 125 polynucleotides, based on which tissues they are most highly expressed in (see AAX84933 for described uses).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                               WO200157272-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide #57
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           17-OCT-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did no specification, but was obtained in electronic at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Penn
                                                                                                                                                                                                                                      09-AUG-2001
